**RISK FACTORS**

An investment in the Medium-Term Notes presents certain risks that are different from an investment in conventional fixed-rate debt securities that pay interest periodically. If you hold the Medium-Term Notes to maturity, they will provide return of your principal, including return of the applicable discount, but their market value is likely to fluctuate substantially with changes in prevailing interest rates. The market value of the Medium-Term Notes generally will fall in a rising interest rate environment creating a risk of loss of your investment capital if your circumstances do not permit you to hold the Medium-Term Notes to maturity; the market value of the Medium-Term Notes generally will rise in a falling interest rate environment. The possibility of such substantial price volatility, combined with the fact that payments on the Medium-Term Notes will be made only at maturity, also could affect the secondary market for, and the liquidity of, the Medium-Term Notes. Consequently, you should purchase the Medium-Term Notes only if you understand, either alone or with a financial advisor and are able to bear the yield, market, liquidity and structure risks associated with them. See "Risk Factors" in the Offering Circular.

Prospective investors should consult their own tax and legal advisors as to the tax consequences of holding, owning and disposing of the Medium-Term Notes, and whether and to what extent the Medium-Term Notes constitute legal investments for such investors. See "Certain United States Federal Tax Consequences" and "Legal Investment Considerations" in the Offering Circular.
