## **RISK FACTORS**

An investment in the Medium-Term Notes entails certain risks not associated with an investment in conventional fixed-rate debt securities that pay interest periodically. While the Medium-Term Notes, if held to maturity or redemption, will provide return of their principal, including return of the accreted value to the optional redemption date, their market value could be adversely affected by changes in prevailing interest rates and the optional redemption feature. This effect on the market value could be magnified in a rising interest rate environment in the case of the Medium-Term Notes due to their relatively long remaining term to maturity. In such an environment, the market value of the Medium-Term Notes generally will fall, which could result in significant losses to investors whose circumstances do not permit them to hold the Medium-Term Notes until maturity. It is also unlikely that Freddie Mac would redeem the Medium-Term Notes in such an interest rate environment, when Freddie Mac's costs of borrowing would be relatively high. On the other hand, in a falling interest rate environment, in which the market value of the Medium-Term Notes generally would rise, it is likely that Freddie Mac would redeem the Medium-Term Notes, when its costs of borrowing would be relatively low; under those circumstances, it is likely that the optional redemption provision would restrict the market value that the Medium-Term Notes otherwise would have. Those factors, combined with the fact that payments on the Medium-Term Notes will be made only at maturity or upon redemption, and not periodically, also could affect the secondary market for and the liquidity of the Medium-Term Notes. Investors therefore should have the financial status and, either alone or with a financial advisor, the knowledge and experience in financial and business matters sufficient to evaluate the merits and to bear the risks of investing in the Medium-Term Notes in light of each investors particular circumstances and should consider whether their circumstances permit them to hold the Medium-Term Notes until maturity, or otherwise to bear the risks of illiquidity, redemption and changes in interest rates. See "Risk Factors" in the Offering Circular.
